

# CLINICAL MASSAGE

As the foundation of the Kivett Instant Pain Relief System (KIPRS), clinical massage is a combination of several massage techniques including, but not limited to effleurage, Swedish, deep-tissue, mechanical vibration, sports massage, raindrop aromatherapy, trigger point, ART (active release therapy), myofascial release, medical massage, acupuncture/acupressure, cupping therapy, MAT therapy, TMJ release, and IASTM with tools. Every client is treated with an exclusive treatment plan, which changes each appointment because YOUR BODY CHANGES each appointment. We do NOT provide a protocol-specific or “cookie-cutter recipe” type treatment for your pain! Another professional has likely failed you with this approach, so we guarantee to provide you with a much different experience full of “MAGIK”! At the start of your session, your therapist will discuss what is bothering you and complete a quick functional assessment to get an idea of the underlying cause of your pain. From there, we will make sure you are ok and understand our treatment recommendations before proceeding; you are in complete control of your session! More importantly, we want to make sure you understand that we have the power to take away your pain without causing you more pain during the treatment. You can expect to leave your appointment feeling refreshed, relaxed, recharged, with less anxiety and less stress! Be ready to enjoy your life with a higher level of function, full of vitality and confidence, and MUCH LESS PAIN INSTANTLY!
